

■ IT Quick Reference | Nova Scotia Credit Union

Try these first — your fix is probably right here!

■ Passwords & Accounts

- Check Caps Lock before re-entering your password
- 3–5 wrong attempts = account lockout — stop guessing!
- Reset your own password at **aka.ms/sspr** (from any device)
- MFA code not working? Sync your phone clock: Settings → Date & Time → Set Automatically
- Change an expiring password: **Ctrl+Alt+Del** → **Change a password**
- New phone? Update MFA at **aka.ms/mysecurityinfo** before losing your old device

■ Internet & Network

- Check the ethernet cable first — re-seat both ends
- Restart your computer (full restart, not sleep) to clear network glitches
- Right-click the network icon → Troubleshoot problems
- VPN won't connect? Confirm home internet works first, then use your latest M365 password
- Slow internet? Close unused tabs/apps and check **fast.com** for speed
- Multiple people affected? Check the System Status board before calling IT

■ Email & Calendar

- Outlook frozen? Task Manager (Ctrl+Alt+Del) → End Task → reopen
- Working offline? Send/Receive tab → toggle **Work Offline** off
- Outlook still broken? Test at **outlook.office.com** to isolate app vs. account
- Mailbox full? Empty Deleted Items & Junk, then sort Inbox by size and delete large attachments
- Suspicious email? Do NOT click links — forward to IT for review
- Good email in Junk? Right-click → Junk → Not Junk

■ Printers & Scanners

- Check power, paper tray, and error lights on the printer first
- Clear stuck print jobs: Settings → Printers → Open print queue → right-click → Cancel
- Restart Print Spooler: Start → Services → Print Spooler → Restart
- Paper jam: turn printer OFF first, then carefully pull paper in feed direction
- Printer missing? Settings → Printers → Add — must be on office network (not guest Wi-Fi)
- Scanner to email not working? Confirm your current work email is on file

■ Computer Performance

- **Restart weekly** — this is the #1 fix for slowness and freeze-ups
- Frozen? Ctrl+Alt+Del → Task Manager → End Task on the stuck app
- Last resort only: hold power button 5 sec to force off, wait 15 sec, restart
- Blue Screen? Note the error code (take a photo!), let Windows restart/repair
- Drive almost full? Empty Recycle Bin, Downloads, run Disk Cleanup on C:
- Suspected virus? STOP, unplug network cable, DO NOT turn off — call IT NOW

■ Teams & Phones

- Muted in Teams? Look for the red mic icon — click to unmute
- Wrong audio device? ... → Device Settings in the call bar
- Camera blocked? Settings → Privacy & Security → Camera → enable Teams
- Desk phone dead? Unplug its network cable 15 sec, replug, wait 1 min to reboot
- Voicemail? Teams → Calls → Voicemail, or check your email inbox
- No dial tone after reboot? Call IT from your cell or a colleague's phone

■ CALL IT IMMEDIATELY — Do Not Try to Fix These Yourself

- Pop-ups demanding **payment / ransomware**
- You suspect your **account has been hacked**
- Clicked a link/attachment and **something feels wrong**
- Core banking is **completely down** with members waiting
- Accidentally **deleted member / financial data**
- **Fully locked out** of Windows, email, and banking
- Caller claiming to be IT asks for **your password** — hang up!
- **Repeated Blue Screens** more than once in a short period

■ Good Habits — Do These Every Day

- **Restart weekly** — Fridays work great. Do NOT just sleep.
- **Lock when away** — press **Win + L** every time you leave your desk
- **Hover before clicking** links in email. Urgent = suspicious. Call to verify.
- **Save to OneDrive** or the shared drive — Desktop files are NOT backed up
- **New phone?** Tell IT *before* you lose your old MFA device
- **Clean monthly** — empty Recycle Bin & Downloads to keep your PC fast

■ Contact IT

- IT Service Desk: Ext. 500 / (902) 555-0199
- Email (non-urgent): **it.support@yourcreditunion.ns.ca**
